

Thanks for stopping by! Porter Computer is in the midst of redesigning our website. Here's a little about who we are, what we do and we do I.T. all around Mississippi!

Porter Computer began in October 2008 as a small computer shop in Meridian, MS. We did just about anything and everything to serve our clients both business and residential. Through the years we have discovered that our business clients need us more and there is more of a demand for commercial network services so we currently only service businesses and organizations.

We are not your typical "repair shop". We are what is considered a MSP (Managed Services Provider). This means we don't just fix what's broken and walk away and wait for something else to break so you can spend more money but we Manage all aspects of your business network much like an in-house employee would...only better.

We have the tools, services, knowledge and experience to get the job done, keep your network secure, and have business continuity so you can keep working. After all, your business lives in your network, without it your business may suffer.

We manage all types of industries, however we specialize in Professional Services and Medical Offices. We are HIPAA Compliant and have the experience and resources to get your compliant as well.
